Objective:

I will use all my abilities, knowledge and skills from the BIT Program in Red River College, energy and enthusiasm to create special things. Eager to develop my skills in HTML5, SCSS, JavaScript, React, .NET, SQL Server, database, Ruby on Rails and other frameworks and libraries to become a full-stack web developer.

Personal Skills and Qualities

- Gained fundamental concepts in Java core, learn about mobile developer, then developed an android app using Java
- Strengthened C#, .NET Framework, Ruby on Rails, MVC model and enhanced knowledge about object-oriented programming principles
- Developed websites using HTML, CSS, JavaScript, React, PHP, Ruby on Rails as well as other libraries and frameworks
- Developed Web applications and Web Service using ASP.NET and SQL Server
- Learn Python, React and other popular libraries for web developer
- Practice data structure and algorithms
- Prepared reports, documents, proposals, and correspondence
- Managed time to dealt with deadlines and stressful situations
- Communicated well with team members and clients

Work Experience

Jeux Sam Amuse

Software Developer – Internship

2020 May – 2020 August

The main task of our project is converting French educational flash games into HTML5. My tasked are:

- Developed the game from scratch with client's resources using JavaScript and PixiJs Engine
- Broke the project to small tasks and manage them using Kanban chart

- Deal with problems in multiple browsers compatibility, responsible on multiple devices, and loading time of games
- Write documents about the gameplay for players and about the code for the next developers

Young's Trading Market

2018 – 2019

- Served customers in cashier position
- Answered customers questions and communicated with colleagues to provided products which customers need
- Checked the shelves and restocked the products
- Checked the warehouse and noticed managers out of stock products
- Maintained the store as well as the warehouse

Projects

- Developed an ecommerce website from scratch using Ruby on Rails, the functions of website are using devise to manage admin and back end stuff, users register, search products, create the cart for every customer, create and pay order using Stripe.
- Built an android application name "SOS" using Java, the application is a hub for people need help and rescue teams in emergency situations. It allows people mark the locations on map, I used Firebase Realtime Database for data and Mapbox for the map.
- Built a CRUD website for users contribute ideas for a new MOBA game using HTML5, CSS, JavaScript, PHP, MySQL database.
- Developed a student management system on web form use C#, .NET Framework and SQL server

Education

Red River College

2017 - 2020

- Diploma, Business Information Technology
- Certification, Language Training Centre
